$$\sum_{\substack{k \neq 1 \\ j=k}}^{\backslash \circ \circ} anything$$

---

روش انتگرال گیری جزء به جزء برای  $\int u \, dv$  به شکل روبرو است :  $\int \sin x + \cos x \, dx$

## ۱ مقدمات

$$\int \sin x + \cos x \, dx \tag{۱}$$

$$L_i(x) = \prod_{j=\circ, i \neq j}^n \frac{x - x_j}{x_i - x_j} \tag{۲}$$

$$\lim_{x \rightarrow \circ} f(x) \stackrel{Hop}{=} \circ, \quad X^{**} \tag{۳}$$

با توجه به فرمول (۱) می دانیم :

## ۲ انواع فرمول های یکسان

$$L_i(x) = \prod_{j=\circ, i \neq j}^n \frac{x - x_j}{x_i - x_j}$$

$$L_i(x) = \prod_{j=\circ, i \neq j}^n \frac{x - x_j}{x_i - x_j}$$

$$L_i(x) = \prod_{j=\circ, i \neq j}^n \frac{x - x_j}{x_i - x_j}$$

### ۳ فرمول نویسی چند خطی

$$\begin{aligned} a &= b \\ &= a^{\flat} + b \\ &= \sin x \end{aligned}$$

$$\begin{aligned} L_i(x) &= \prod_{\substack{j=\circ \\ j \neq i}}^n \frac{x - x_j}{x_i - x_j} \\ &= \frac{(x - x_{\circ})(x - x_{\backslash}) \cdots (x - x_n)}{(x_i - x_{\backslash}) \cdots (c_i - x_n)} \end{aligned}$$

$$\begin{aligned} L_i(x) &= \prod_{\substack{j=\circ \\ j \neq i}}^n \frac{x - x_j}{x_i - x_j} \\ &= \frac{(x - x_{\circ})(x - x_{\backslash}) \cdots (x - x_n)}{(x_i - x_{\backslash}) \cdots (c_i - x_n)} \end{aligned} \tag{۴}$$

همانطور که در رابطه (۴) دیدیم ...
